-1- FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARIETY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              <del>-</del>

                                                                                                                                                                                                                                                                     ADULT:

ADULT:

ADULT:

ADULT:

DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE
HYDROPHOBIC TRANSMEMBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE
POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (S4): S4 SEGMENTS
PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A
SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.
DOMAIN: BINDING OF INTRACELLULAR CALCIUM THROUGH THE EF-HAND MOTIF
INHIBITS THE OPENING OF THE CHANNEL (BY SIMILARTY).

PTM: PHOSPHORYLATION BY CAPK ACTIVATES THE CHANNEL (PROBABLE). IS
ALSO PHOSPHORYLATED IN VITRO BY CAM-KINASE II, PKC AND CGPK.

SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS

IF FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM INOS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARIETY OF CALCIUM—DEPENDENT PROCESSES, INCLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-1E GIVES RISE TO R-TYPE CALCIUM CURRENTS. R-TYPE CALCIUM CHANNELS BY OMEGA-AGATOXIN-ITIA (OMEGA-AGA-IIIA). THEY ARE HOWEVER INSENSITIVE TO DIHYDROPYRIOINES (DHP), OMEGA-CONOTOXIN-GVIA (OMEGA-CTX-GVIA), AND OMEGA-AGATOXIN-IVA (OMEGA-AGA-IIIA). THE MODULATION OF FIRING PATTERNS OF NEURONS WHICH IS INVOLVED IN THE MODULATION OF FIRING PATTERNS OF NEURONS WHICH IS IMPORTANT FOR INFORMATION PROCESSING.

IN A 1:1:11 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE ALPHA-1, SUBUNIT SUBUNIT IS SUBUNIT IS SUBUNIT IS SUBUNIT OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS IN A 1:1:11 RATIO. THE AUXILLARY SUBUNITS BETA AND ALPHA-2/DELTA CHANNEL ACTIVITY. THE AUXILLARY SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISCLIPIDE BRIDGE REGILATE THE CHANNEL ACTIVITY.

SUBCELLULAR LOCATION: Integral membrane protein.

INDEACH SYNTHE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE PROBABLY REPRESENT THE COLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (S4), S4 SEGMENTS PROBABLY REPRESENT THE CALCIUM CHANNEL ALPHA-1 SUBUNITS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GYIA (OMEGA-CTX-CVIA) AND OMEGA-ROATOXIN-IVA (OMEGA-AGA-TVA).

11 SUBUNIT: VOLTAGE-DEPENDENT CALCIUM CHANNELS ARE MULTISUBUNIT COMPLEXES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNIT IN A 1:1:1:1 RATIO. THE CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE ALPHA-1 SUBUNIT. IN MANY CASES, THIS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. THE AUXILIARY SUBUNITS BETA AND ALPHA-2/DELTA LINKED BY A DISULFIDE BRIDGE REGULATE THE CHANNEL ACTIVITY.

1-1 SUBCELLULAR LOCATION: INTEGTAL membrane protein.

1-1 ALTERNATIVE PRODUCTS: AT LEAST 3 ISOFORMS; HCA3A (SHOWN HERE), CACH3B AND CACH3D; ARE PRODUCED BY ALTERNATIVE SPLICING. CACH3B IS IDENTICAL TO HCA3A IN THE FRAGMENT SEQUENCED.

1-1 TISSUE SPECIFICITY: EXPRESSED IN BRAIN, HEART AND SKELETAL MUSCLE.

1-1 DOMAIN: EACH OF THE FOUR INVERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SEGMENTS (51), S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMEMBRANE SEGMENT (54). S4 SEGMENTS PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION.

1-1 SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        J. Biol. Chem. 265:20430-20436(1990).

-I- FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARLETY OF CALCIUM-DEPENDENT PROCESSES, ICLUDING MUSCLE CONTRACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOFORM ALPHA-1D GIVES RISE TO L-TYPE CALCIUM CURRENTS. LONG-LASTING (L-TYPE) CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HVA) GROUP. THEY ARE BLOCKED BY DIHYDROPYRIDINES (DHP), PHENYLALKYLAMINES, BENZOTHIAZEPINES, AND BY OMEGA-AGATOXIN-IIIA (OMEGA-AGA-IIIA). THEY ARE HOMEVER INSENSITIVE TO OMEGA-CONOTOXIN-TUTN (AUGUSTA) AND OMEGA-TOXAGA-TVAN
                                                                                                                                            REPEAT

SIMILARITY).
SUBCELLULAR LOCATION: Integral TISSUE SPECIFICITY: EXPRESSION membrane mbrane protein. HIGHER IN THE FOREBRAIN THAN

THE ELECTRIC LOBE.

DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMEMBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMEMBRANE SECKENT (S4). S4 SECMENTS PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED AMINO ACIDS AT EVERY THIRD POSITION SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS FAMILY.

           SUBCELLULAR LOCATION: Integral membrane protein.
ALTERNATIVE PRODUCTS: AT LEAST 2 ISOFORMS; NEURONAL-TYPE (SHOWN HERE) AND BETA-CELL-TYPE; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN PANCREATIC ISLETS AND IN BRAIN,
WHERE IT HAS BEEN SEEN IN HIPPOCAMPUS, BASAL GANGLIA, HABENULA AND
THALAMUS. NO EXPRESSION IN SKELETAL MUSCLE.
DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE
HYDROPHOBIC TRANSMEMBRANE SEGMENTS (SI, 22, S3, S5, S6) AND ONE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ture and functional expression of alpha1, alpha2, and beta ts of a novel human neuronal calcium channel subtype."; 8:71-84(1992).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         M.E., Feldman D.H., McCue A.F.,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
PEND LUCL. 300:(7-13/1372).

11 FUNCTION: VOLTAGE-SENSITIVE CALCIUM CHANNELS (VSCC) MEDIATE THE ENTRY OF CALCIUM IONS INTO EXCITABLE CELLS AND ARE ALSO INVOLVED IN A VARIETY OF CALCIUM-DEPENDENT PROCESSES, INCLUDING MUSCLE COVERACTION, HORMONE OR NEUROTRANSMITTER RELEASE, GENE EXPRESSION, CELL MOTILITY, CELL DIVISION AND CELL DEATH. THE ISOSORM ALPHA-1E GIVES RISE TO R-TYPE CALCIUM CURRENTS. R-TYPE CALCIUM CHANNELS BELONG TO THE "HIGH-VOLTAGE ACTIVATED" (HVA) GROUP AND ARE BLOCKED BY NICKEL, AND PARTIALLY BY OMEGA-AGATOXIN-IIIA (OMEGA-AGA-IIIA). THEY ARE HOWEVER INSENSITIVE TO DITYDROPYRIDINES (DHP), OMEGA-GONOTOXIN-GVIA (OMEGA-CTX-GVIA), AND OMEGA-AGATOXIN-IVA (OMEGA-CTX-GVIA), CALCIUM CHANNELS CONTANING ALPHA-1E SUBUNIT COULD BE INVOLVED IN THE MODULATION OF FIRING PATTERNS OF NEURONS WHICH IS IMPORTANT FOR INFORMATION PROCESSING.

10 SUBUNIT: VOLTAGE-DEPENDENT CALCIUM CHANNELS ARE MULTISUBUNIT COMPLEXES, CONSISTING OF ALPHA-1, ALPHA-2, BETA AND DELTA SUBUNITS OF NEURONS WHICH IS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CASES, THIS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY IS DIRECTED BY THE PORE-FORMING AND VOLTAGE-SENSITIVE ALPHA-1 SUBUNIT. IN MANY CASES, THIS SUBUNIT IS SUFFICIENT TO GENERATE VOLTAGE-SENSITIVE CALCIUM CHANNEL ACTIVITY. BETA AND ALPHA-2/DELTA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Voltage-dependent R-type calcium channel alpha-1E subunit (Calcium channel, L type, alpha-1 polypeptide, isoform 6) (Brain calcium channel II) (BII).

DOMAIN: EACH OF THE FOUR INTERNAL REPEATS CONTAINS FIVE HYDROPHOBIC TRANSMENBRANE SEGMENTS (S1, S2, S3, S5, S6) AND ONE POSITIVELY CHARGED TRANSMENBRANE SEGMENT (S4). S4 SEGMENTS PROBABLY REPRESENT THE VOLTAGE-SENSOR AND ARE CHARACTERIZED BY A SERIES OF POSITIVELY CHARGED ANINO ACIDS AT EVERY THIRD POSITION. SIMILARITY: BELONGS TO THE CALCIUM CHANNEL ALPHA-1 SUBUNITS FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   LINKED BY A DISULFIDE BRIDGE REGULATE THE CHANNEL ACTIVITY.
SUBCELLULAR LOCATION: Integral membrane protectin.
ALTERNATIVE PRODUCTS: 2 ISOPORMS; BII-1 (SHOWN HERE) AND BII-2;
ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: ABUNDANT IN THE CEREBRAL CORTEX, HIPPOCAMPU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 $29236; $29230
